

12 VOLT TIMER

- Set to 30mins, 60mins or 120mins
- 10 amp capacity
- 1m long

With a 12v timer you can run a 12v appliance for up to 2 hours and then it will switch off automatically saving limited 12 volt battery power.

Instructions

Switch the Power/Timer switch to Power if continuous power is required. The Green LED will illuminate when the unit is connected to a 12 volt DC power source.

To operate the timer

1. Switch the Power/Timer switch to Timer
2. Set the time required to 30mins, 60mins or 120mins
3. Push the reset button to start the timer
4. The red timer light will flash for 2-3 seconds then stay on
5. When the selected time is up power will be cut to the appliance

The red Timer light will stay on. Push the reset button if more time is required

Uses include 12v electric blankets, 12v lighting, 12v bug zappers and a 12v fan when going to bed. It will switch a fan off after 30-120 minutes letting you sleep in warm weather.
